

8.

DOUBLE-SIDE THERMAL CONDUCTIVE TAPE.

GENERAL INFORMATION

It's a thermally conductive adhesive tape designed to provide an efficient method of mounting heat sinks onto devices such as microprocessor, small electronic packages and other components.

It eliminates the need for clips, clamps, other forms of mechanical fixing and messy thermal compound.

It consists of a highly conductive aluminium foil coated on both sides with thermally conductive high strength adhesive.

We can supply this tape in rolls, sheets or individual shapes.
